SAFETY

SAFETY PRECAUTIONS

Please read all instructions before attempting to unpack, install or operate this equipment and before connecting the power supply. Please keep the following in mind as you unpack and install this equipment:

- ♦ Always follow basic safety precautions to reduce the risk of fire, electrical shock and injury to persons.
- ♦ To prevent fire or shock hazard, do not expose the unit to rain, moisture or install this product near water.
- ♦ Never spill liquid of any kind on or into this product.
- ♦ Never push an object of any kind into this product through any openings or empty slots in the unit, as you may damage parts inside the unit.
- ♦ Do not attach the power supply cabling to building surfaces.
- ♦ Use only the supplied power supply unit (PSU). Do not use the PSU if it is damaged.
- ♦ Do not allow anything to rest on the power cabling or allow any weight to be placed upon it or any person walk on it.
- ♦ To protect the unit from overheating, do not block any vents or openings in the unit housing that provide ventilation and allow for sufficient space for air to circulate around the unit.
- ♦ The mounting holes are intended for desktop mounting and can't be used for wall mounting.
- ♦ The power cord must be connected to a socket outlet with Earth Ground.

CHAPTER 1: ENCODERS

1.1 INTRODUCTION

This Encoder is designed for high-quality, IP routable, AV extension with virtually zero latency. The unit is capable of transmitting AV and other data for long extension, enhancing the flexibility of any installation. By using a sophisticated ultra-light compression scheme (lossless for most content) it is a great solution for extending 4K audio/video streams (HDMI® or Type C) and data. Advanced HDMI content, such as HDR (High Dynamic Range), 10-bit color and multi-channel HD Bitstream audio, can be transmitted in pass-through mode.

For the copper encoder, the use of high-quality, 10-Gbps Ethernet ports and Cat.6A or better cable allows for point-to-point transmission of the video signal up to 100m.

For the fiber encoder, the use of interchangeable, field replaceable, SFP+ modules allows for transmission distances of up to 30km. (Maximum transmission distance depends on the SFP+ modules used.)

Multiple control and data signals may also be transmitted along with the audio and video, including IR, RS-232, and Ethernet.

When combined with the optional MCX Gen2 Controller, or control software, the functionality of the Encoder expands exponentially. Multiple encoders/decoders may be combined with one or more 10-Gigabit fiber Ethernet switches. The units can be used together to form a distributed video matrix, a multi-viewer system, or a video wall system. This AV network capability provides flexibility in large event installations.

The integrated USB hub of each decoder can be configured to be in USB Host or Device Mode. It can function as a simple point-to-point KVM extension, freely routed between any two endpoints, or it can be configured into a special "Simultaneous" mode, allowing up to 7 Host Mode units to extend their USB ports to a single Device Mode unit. This type of USB KVM routing flexibility enables a wide range of multi-user, control room, or on-demand installation scenarios.

The built-in EDID and HDCP management functionality enables the unit to fit into every video distribution situation. Basic configuration of the unit can be achieved via front panel buttons with an OSD (On-Screen Display). Advanced control requires the optional MCX Gen2 controller, or control software, and a LAN connection.

1.2 APPLICATIONS

- ♦ Video, Audio, LAN, IR, and USB over copper cable or fiber extension
- ♦ Long distance data and video transmission immune to RF interference
- ♦ Point-to-point secure video conferencing
- ♦ Hotel or convention center display
- ♦ Multi-monitor broadcast
- ♦ Distributed video matrix system
- ♦ Distributed video wall system
- ♦ Remote KVM system control

1.3 PACKAGE CONTENTS

- ♦ (1) UHD+ copper or fiber transmitter
- ♦ (1) 12V/3A DC power adapter
- ♦ (1) Power cord
- ♦ (1) IR emitter
- ♦ (1) 3-pin terminal block

CHAPTER 1: ENCODERS

1.4 SYSTEM REQUIREMENTS

- ♦ HDMI® or Type-C video source equipment, such as a media player, video game console, PC, or set-top box
- ♦ HDMI receiving equipment, such as an HDTV, monitor, or audio amplifier
- ♦ Analog audio receiving equipment, such as headphones, an audio amplifier, or powered speakers
- ♦ A 10-Gbps Ethernet network switch with jumbo frame and IGMP snooping support is required for distributed video systems. (Optional, required for multi-encoder/decoder copper systems)
- ♦ A 10-Gbps fiber Ethernet network switch with jumbo frame and IGMP snooping support is required for distributed video systems. (Optional, required for multi-encoder/decoder fiber systems)
- ♦ IEEE 802.3ae compatible SFP+ fiber module supporting a dual-optical fiber connection style, such as LC, or a pre-terminated crossover dual-optical fiber cable (required for fiber encoder)
- ♦ Note: Single-mode and multi-mode support is dependent on the SFP+ modules used
- ♦ MCX Gen2 Controller or control software to configure distributed matrix, video wall or multi-view systems (Optional)

CHAPTER 1: ENCODERS

1.5 FEATURES

- Provides AV, IR, RS-232, USB 2.0, and ethernet extension
- HDMI 2.0 and DVI 1.0 compatible
- HDCP 2.2 and HDCP 1.4 compliant
- (1) HDMI®, (1) HDMI Loop-Through, (1) USB Type C; and (1) 3.5mm phone jack input
- IP switchable with virtually zero latency (requires optional MCX Gen2 controller or control software)
- Optional lossless compression to allow video transfer within limited bandwidth
- Extends up to 100m in point-to-point mode (with CAT.6A cable for copper encoder)
- Extends up to 30km over fiber (maximum distance depends on the SFP+ module and type of fiber used for fiber encoder)
- Supports independent breakaway A/V matrix switching with minimum latency, video wall generation, and multi-view compositing (requires optional MCX Gen2 controller/control software)
- Facilitates pass-through of 10/12-bit HDR sources (point-to-point and Genlock modes only)
- Enables pass-through of audio formats including LPCM (up to eight channels), Bitstream and HD Bitstream from HDMI or DP sources
- Unit can be powered directly by PoE when connected to a 10 Gigabit Ethernet (10GbE) switch that provides PoE (802.3at) (for copper encoder)
- Signal transmission interfaces with 10-Gigabit Ethernet switches via XFI (IEEE 802.3ae) compatible SFP+ fiber modules (for fiber encoder)
- Basic configuration via front panel buttons with an OSD
- Supports the use of an external control center (MCX Gen2 Controller) or control software to provide expanded functionality (Contact Black Box for more information.)

CHAPTER 1: ENCODERS

1.6 OPERATION CONTROLS AND FUNCTIONS

1.6.1 FRONT PANEL

FRONT PANEL

TABLE 1-1. FRONT-PANEL COMPONENTS

NUMBER IN FIGURE ABOVE	COMPONENT	DESCRIPTION
1	(1) Power LED indicator	Lights ON or OFF for Power
2	(1) Status LED block	GbE LED: This LED will illuminate and blink to indicate a live and active connection on the local gigabit Ethernet port. VIDEO LED: This LED will illuminate Green when a video signal is live on the optical fiber streaming port or illuminate Amber when streaming a detected input stream. When no video is active, the LED will remain off, even if the streaming connection is valid. LINK LED: These LEDs will illuminate and blink to indicate data transmission and reception activity across the optical fiber streaming connection. USB LED: This LED will illuminate when the unit's USB ports have successfully paired with the USB ports on another unit. This LED will blink if the unit's USB ports are not currently paired and are in stand-by mode.
3	(1) Menu button	Press to enter the OSD menu or to back out from menu items.
4	(1) Menu button: - Minus button	Press to move up or adjust selections within OSD menus. When not in a menu, press to manually switch between encoder source inputs.
5	(1) Menu button: + button	Press to move up or adjust selections within OSD menus. When not in a menu, press to manually switch between decoder source inputs.
6	(1) Enter/Info button	When inside an OSD menu, press to confirm a selection or to go deeper into a menu item. When not in a menu, press to activate the Information OSD.

CHAPTER 1: ENCODERS

1.6.2 REAR PANEL

REAR PANEL (COPPER)

REAR PANEL (FIBER)

CHAPTER 1: ENCODERS

TABLE 1-2. REAR-PANEL COMPONENTS

NUMBER IN FIGURES ON PREVIOUS PAGE	COMPONENT	DESCRIPTION
1	(1) HDMI® Out Port	Connect to an HDMI TV, monitor, or amplifier for digital video and audio output.
2	(1) HDMI In Port	Connect to HDMI source equipment, such as a media player, game console, or set-top box.
3	(1) Type C In Port	Connect to Type C or USB Type A to Type C source equipment, such as a PC or laptop.
4	(1) Cat5E/6/7 port	Connect directly to a compatible encoder/decoder for point-to-point extension, or to a 10 Gigabit Ethernet switch for distributed matrixing (requires MCX Gen2 Controller or control software) with a single Cat.5e/6/7 cable for extension of all data signals (for copper encoder). NOTE: If the connected network switch supports the IEEE 802.3at-2009 PoE (Power over Ethernet) standard, this unit can optionally be powered directly via this Ethernet port.
	OR (1) SFP+ port	Insert a standard SFP+ module and connect the appropriate optical cable to allow data transmission to a compatible decoder or to a 10-gigabit optical fiber network switch (for fiber encoder). NOTE: The SFP+ module must support a dual-optical fiber connection style, such as LC, or be pre-terminated dual-optical fiber cables. Single-mode and multi-mode support is dependent on the SFP+ modules used.
5	(1) Audio port	As OUT: Connect to powered speakers or an amplifier for stereo analog audio output. As IN: Connect to the stereo analog output of a device, such as a CD player or PC. NOTE: When the encoder and decoder are connected directly in a point-to-point configuration, audio is routed directly to the opposite end's Ports. Free routing can only be configured by use of the optional MCX Gen2 Master Controller or control software.
6	(2) IR ports	OUT Port: Connect to an IR Blaster to broadcast IR signals from a connected encoder to devices within direct line-of sight of the IR Blaster. IN Port: Connect to an IR Extender to receive IR control signals and extend them to devices connected to a connected encoder. Ensure that the remote being used is within direct line-of-sight of the IR Extender. NOTE: Currently, only 38KHz IR signal extension is supported.
7	(1) RS-232 Terminal Block	Connect directly to a PC, laptop or serial controllable device with a 3-pin adapter cable to extend the RS-232 signal between encoder and decoder.
8	LAN Port	Connection for device configuration only
9	DC 12V Port	Plug the 12V DC power adapter into this port and connect it to an AC wall outlet for power.

CHAPTER 1: ENCODERS

CHAPTER 1: ENCODERS

This unit provides the following six default EDIDs:

UNIT'S DEFAULT EDIDS	
FHD 2CH	1920×1080P@60HZ (4.95GBPS), 8-BIT COLOR, LPCM 2.0
FHD MCH	1920×1080P@60HZ (4.95GBPS), 8-BIT COLOR, LPCM 7.1 & BITSTREAM
UHD 2CH	3840×2160P@30HZ (10.2GBPS), 12-BIT DEEP COLOR, LPCM 2.0
UHD MCH	3840×2160P@30HZ (10.2GBPS), 12-BIT DEEP COLOR, LPCM 7.1 & BITSTREAM
UHD+ 2CH	3840×2160P@60HZ (18GBPS), 12-BIT DEEP COLOR, LPCM 2.0
UHD+ MCH	3840×2160P@60HZ (18GBPS), 12-BIT DEEP COLOR, LPCM 7.1 & BITSTREAM

DEFAULT EDIDS

NOTE: In some rare cases it is possible for custom or external EDIDs to cause compatibility issues with certain sources. If this happens, it is recommended to switch to one of the six default EDIDs for maximum compatibility.

CHAPTER 1: ENCODERS

1.6.6 BASIC AV EXTENSION

1.6.6.1 POINT-TO-POINT (ONE WAY)

The most basic extension configuration available is a point-to-point system with a single transmitter unit acting as an encoder connected directly to a single receiver unit acting as a decoder. In this configuration the HDMI®/DP input on the encoder side is transmitted to the connected decoder side without modification to the audio or video format. The analog stereo audio input on the encoder transfers audio directly to the analog stereo audio output on the decoder. The LAN, RS-232 and IR ports form direct connections between the encoder and decoder as well. This configuration is ideal for basic video extension as well as remote KVM applications.

NOTE: These configurations do not use or require an external control center, such as the MCX Gen2 Controller, to function. No audio insertion/extraction is performed in these configurations.

CHAPTER 1: ENCODERS

1.6.7 ADVANCED AV EXTENSION

1.6.7.1 MCX GEN2 CONTROLLER

The MCX Gen2 Controller is a hardware solution designed to provide a unified and easy method to access and control all of the encoders and decoders in a system. It provides a user-friendly, and operating system agnostic, web-based interface allowing easy control over all of the most critical functions within a distribution system.

The MCX Gen2 hardware is an optional component and is not included with individual encoder, decoder, or transcoder units. Contact your authorized dealer for more information.

SAMPLE MCX GEN2 CONTROLLER SCREENSHOTS

NOTE: Interface images are for example only and may differ from the delivered product.

CHAPTER 1: ENCODERS

1.6.7.2 CONFIGURATION EXAMPLES

When combined with the MCX Gen2 Controller, and a 10 Gigabit fiber Ethernet switch, this extension system gains a large number of additional configuration options including: multi-in/multi-out matrix switching with breakaway audio, video wall creation, and a multiview output mode. Audio extraction and embedding is fully controllable. Additionally, audio, USB, IR, and RS-232 routing can be fully controlled.

- Up to 1080p@60Hz, 12-bit color
- Data rates lower than 5.3Gbps or below 225MHz TMDS clock

4K30 (4K UHD Video)

- 4K@24/25/30Hz & 4K@50/60Hz (4:2:0), 8-bit color
- Data rates higher than 5.3Gbps or above 225MHz TMDS clock but below 10.2Gbps

4K60 (4K UHD+ Video)

- 4K@50/60Hz (4:4:4, 8-bit)
- 4K@50/60Hz (4:2:0, 10-bit HDR)
- Data rates higher than 10.2Gbps

CHAPTER 2: DECODERS

2.1 INTRODUCTION

This Decoder is designed for high-quality, IP routable, AV extension with virtually zero latency. The unit is capable of receiving AV and other data for long extension, enhancing the flexibility of any installation. By using a sophisticated ultra-light compression scheme (lossless for most content) it is a great solution for extending 4K audio/video streams (HDMI® or DisplayPort™) and data. Advanced HDMI content, such as HDR (High Dynamic Range), 10-bit color and multi-channel HD Bitstream audio, can be transmitted in pass-through mode.

For the copper decoder, the use of high-quality 10-Gbps Ethernet ports and Cat.6A or better cable allows for point-to-point transmission of the video signal up to 100m.

For the fiber decoder, the use of interchangeable, field replaceable, SFP+ modules allows for transmission distances of up to 30km. (Maximum transmission distance depends on the SFP+ modules used.)

Multiple control and data signals may also be transmitted along with the audio and video, including IR, RS-232, and Ethernet.

When combined with the optional MCX Gen2 Controller, or control software, the functionality of the decoders expands exponentially. Multiple encoders/decoders may be combined with one or more 10-Gigabit fiber Ethernet switches. The units can be used together to form a distributed video matrix, a multi-viewer system, or a video wall system. This AV network capability provides flexibility in large event installations.

The integrated USB hub of each decoder can be configured to be in USB Host or Device Mode. It can function as a simple point-to-point KVM extension, freely routed between any two endpoints, or it can be configured into a special “Simultaneous” mode, allowing up to 7 Host Mode units to extend their USB ports to a single Device Mode unit. This type of USB KVM routing flexibility enables a wide range of multi-user, control room, or on-demand installation scenarios.

The built-in EDID and HDCP management functionality enables the unit to fit into every video distribution situation. Basic configuration of the unit can be achieved via front panel buttons with an OSD (On-Screen Display). Advanced control requires the optional MCX Gen2 controller, or control software, and a LAN connection.

2.2 APPLICATIONS

- ♦ Video, Audio, LAN, IR, and USB over Copper Cable or Fiber extension
- ♦ Long distance data and video transmission immune to RF interference
- ♦ Point-to-Point Secure Video Conferencing
- ♦ Hotel or convention center display
- ♦ Multi-monitor broadcast
- ♦ Distributed video matrix system
- ♦ Distributed video wall system
- ♦ Remote KVM system control

2.3 PACKAGE CONTENTS

- ♦ (1) UHD+ Copper or Fiber Receiver
- ♦ (1) 12V/3A DC Power Adapter
- ♦ (1) Power Cord
- ♦ (1) 3-pin terminal block

CHAPTER 2: DECODERS

2.4 SYSTEM REQUIREMENTS

- Compatible encoders
- HDMI® receiving equipment, such as an HDTV, monitor, or audio amplifier
- Analog audio receiving equipment, such as headphones, an audio amplifier, or powered speakers
- A 10-Gbps Ethernet network switch with jumbo frame and IGMP snooping support is required for distributed video systems. (Optional, required for multi-encoder/decoder copper systems)
- A 10-Gbps fiber Ethernet network switch with jumbo frame and IGMP snooping support is required for distributed video systems. (Optional, required for multi-encoder/decoder fiber systems)
- IEEE 802.3ae compatible SFP+ fiber module supporting a dual-optical fiber connection style, such as LC, or a pre-terminated crossover dual-optical fiber cable (required for fiber decoder)

NOTE: Single-mode and multi-mode support is dependent on the SFP+ modules used.

- MCX Gen2 Controller or control software to configure distributed matrix, video wall, or multi-view systems (Optional)

CHAPTER 2: DECODERS

2.5 FEATURES

- ◆ Provides AV, IR, RS-232, USB 2.0, and Ethernet extension
- ◆ HDMI® 2.0 and DVI 1.0 compatible
- ◆ HDCP 2.2 and HDCP 1.4 compliant
- ◆ (1) HDMI -output, (3) USB TYPE A, (1) Cat5e/6/7 input, (1) 3.5 mm phone jack output; also copper model: (1) 10G RJ-45 input or output, fiber mode: (1) SFP+ input or output
- ◆ IP switchable with minimum latency (requires optional MCX Gen2 Controller or control software)
- ◆ Optional lossless compression to allow video transfer within limited bandwidth
- ◆ Extends up to 100m in point-to-point mode (with Cat.6A cable for copper decoder)
- ◆ Extends up to 30km (Maximum distance depends on the SFP+ module and type of fiber used for fiber decoder.)
- ◆ Supports independent breakaway A/V matrix switching with minimum latency, video wall generation, and multi-view compositing (requires optional MCX Gen2 Controller/control software)
- ◆ Facilitates pass-through of 10/12-bit HDR sources (Point-to-Point and Genlock modes only)
- ◆ Enables pass-through of audio formats including LPCM (up to eight channels), Bitstream and HD Bitstream from HDMI or DP sources
- ◆ Unit can be powered directly by PoE when connected to a 10 Gigabit Ethernet (10GbE) switch that provides PoE (802.3at) (for copper decoder)
- ◆ Signal transmission interfaces with 10-Gigabit Ethernet switches via XFI (IEEE 802.3ae) compatible SFP+ fiber modules (for fiber decoder)
- ◆ Basic configuration via front panel buttons with an OSD
- ◆ Supports the use of an external control center (MCX Gen2 Controller) or control software to provide expanded functionality (Contact Black Box for more information.)

CHAPTER 2: DECODERS

2.6 OPERATION CONTROLS AND FUNCTIONS

2.6.1 FRONT PANEL

FRONT PANEL

TABLE 2-1. FRONT-PANEL COMPONENTS

NUMBER IN FIGURE ABOVE	COMPONENT	DESCRIPTION
1	(1) Power LED indicator	Lights ON or OFF for Power
2	(3) USB 2.0 (Type A) ports	Connect directly to standard USB devices, such as a mouse, keyboard or flash drive to extend their USB functionality to the currently active/routed encoder.
3	(1) Status LED Block	GbE LED: This LED will illuminate and blink to indicate a live and active connection on the local gigabit Ethernet port. VIDEO LED: This LED will illuminate Green when a video signal is live on the optical fiber streaming port or illuminate Amber when streaming a detected input stream. When no video is active, the LED will remain off, even if the streaming connection is valid. LINK LED: These LEDs will illuminate and blink to indicate data transmission and reception activity across the optical fiber streaming connection. USB LED: This LED will illuminate when the unit's USB ports have successfully paired with the USB ports on another unit. This LED will blink if the unit's USB ports are not currently paired and are in stand-by mode.
4	(1) Menu button	Press to enter the OSD menu, or to back out from menu items.
5	(1) Menu button: - Minus button	Press to move up or adjust selections within OSD menus. When not in a menu, press to manually switch between encoder source inputs.
6	(1) Menu button: + button	Press to move up or adjust selections within OSD menus. When not in a menu, press to manually switch between decoder source inputs.
7	(1) Enter/Info button	When inside an OSD menu, press to confirm a selection or to go deeper into a menu item. When not in a menu, press to activate the Information OSD.

CHAPTER 2: DECODERS

2.6.2 REAR PANEL

REAR PANEL (COPPER)

REAR PANEL (FIBER)

CHAPTER 2: DECODERS

TABLE 2-2. REAR-PANEL COMPONENTS

NUMBER IN FIGURES ON PREVIOUS PAGE	COMPONENT	DESCRIPTION
1	(1) HDMI® Out Port	Connect to an HDMI TV, monitor, or amplifier for digital video and audio output.
2	(1) Cat5E/6/7 port	Connect directly to a compatible encoder/decoder for point-to-point extension, or to a 10 Gigabit Ethernet switch for distributed matrixing (requires MCX Gen2 Controller or control software) with a single Cat.5e/6/7 cable for extension of all data signals (for copper decoder).
	OR (1) SFP+ port	NOTE: If the connected network switch supports the IEEE 802.3at-2009 PoE (Power over Ethernet) standard, this unit can optionally be powered directly via this Ethernet port. Insert a standard SFP+ module and connect the appropriate optical cable to allow data transmission to a compatible encoder or to a 10-gigabit optical fiber network switch (for fiber decoder). NOTE: The SFP+ module must support a dual-optical fiber connection style, such as LC, or be pre-terminated dual-optical fiber cables. Single-mode and multi-mode support is dependent on the SFP+ modules used.
3	(1) Audio port	As OUT: Connect to powered speakers or an amplifier for stereo analog audio output. As IN: Connect to the stereo analog output of a device, such as a CD player or PC. NOTE: When the encoder and decoder are connected directly in a point-to-point configuration, audio is routed directly to the opposite end's Ports. Free routing can only be configured by use of the optional MCX Gen2 Master Controller or control software.
4	(2) IR ports	OUT Port: Connect to an IR Blaster to broadcast IR signals from a connected decoder to devices within direct line-of sight of the IR Blaster. IN Port: Connect to an IR Extender to receive IR control signals and extend them to devices connected to a connected decoder. Ensure that the remote being used is within direct line-of-sight of the IR Extender. NOTE: Currently, only 38KHz IR signal extension is supported.
5	(1) RS-232 Terminal Block	Connect directly to a PC, laptop or serial controllable device with a 3-pin adapter cable to extend the RS-232 signal between encoder and decoder.
6	LAN Port	Connection for device configuration only
7	DC 12V Port	Plug the 12V DC power adapter into this port and connect it to an AC wall outlet for power.

CHAPTER 2: DECODERS

2.6.6 BASIC AV EXTENSION

2.6.6.1 POINT-TO-POINT (ONE WAY)

The most basic extension configuration available is a point-to-point system with a single transmitter unit acting as an encoder connected directly to a single receiver unit acting as a decoder. In this configuration the HDMI®/DP input on the encoder side is transmitted to the connected decoder side without modification to the audio or video format. The analog stereo audio input on the encoder transfers audio directly to the analog stereo audio output on the decoder. The LAN, RS-232 and IR ports form direct connections between the encoder and decoder as well. This configuration is ideal for basic video extension as well as remote KVM applications.

COPPER POINT-TO-POINT (ONE WAY)

FIBER POINT-TO-POINT (ONE WAY)

NOTE: These configurations do not use or require an external control center, such as the MCX Gen2 Controller, to function. No audio insertion/extraction is performed in these configurations.

CHAPTER 2: DECODERS

2.6.7 ADVANCED AV EXTENSION

2.6.7.1 MCX GEN2 CONTROLLER

The MCX Gen2 Controller is a hardware solution designed to provide a unified and easy method to access and control all of the encoders and decoders in a system. It provides a user-friendly, and operating system agnostic, web-based interface allowing easy control over all of the most critical functions within a distribution system.

The MCX Gen2 Controller hardware is an optional component and is not included with individual encoder, decoder, or transcoder units. Please contact your authorized dealer for more information.

SAMPLE MCX GEN2 CONTROLLER SCREENSHOTS.

NOTE: Interface images are for example only and may differ from the delivered product.

CHAPTER 2: DECODERS

2.6.7.2 CONFIGURATION EXAMPLES

When combined with the MCX Gen2 Controller, and a 10 Gigabit fiber Ethernet switch, this extension system gains a large number of additional configuration options including: multi-in/multi-out matrix switching with breakaway audio, video wall creation, and a multiview output mode. Audio extraction and embedding is fully controllable. Additionally, audio, USB, IR, and RS-232 routing can be fully controlled.

CHAPTER 3: TRANSCODERS

3.1 INTRODUCTION

This Transcoder is designed for high-quality, IP routable, AV extension with virtually zero latency. The transcoder is able to be configured as an encoder or a decoder, and it is capable of receiving AV and other data for long extension, enhancing the flexibility of any installation. By using a sophisticated ultra-light compression scheme (lossless for most content) it is a great solution for extending 4K audio/video streams (HDMI® or DisplayPort™) and data.

For the copper connection, the use of high-quality 10-Gbps Ethernet ports and Cat.6A or better cable allows for point-to-point transmission of the video signal up to 100m.

For the fiber connection, the use of interchangeable, field replaceable, SFP+ modules allows for transmission distances of up to 30km. (Maximum transmission distance depends on the SFP+ modules used.)

Multiple control and data signals may also be transmitted along with the audio and video, including IR, RS-232, and Ethernet.

When combined with the optional MCX Gen2 Controller, or control software, the functionality of the Transcoder expands exponentially. Multiple transcoders may be combined with one or more 10-Gigabit fiber Ethernet switches. The units can be used together to form a distributed video matrix, a multi-viewer system, or a video wall system. This AV network capability provides flexibility in large event installations.

The integrated USB hub of each transcoder can be configured to be in USB Host or Device Mode. It can function as a simple point-to-point KVM extension, freely routed between any two endpoints, or it can be configured into a special "Simultaneous" mode, allowing up to 7 Host Mode units to extend their USB ports to a single Device Mode unit. This type of USB KVM routing flexibility enables a wide range of multi-user, control room, or on-demand installation scenarios.

The built-in EDID and HDCP management functionality enables the unit to fit into every video distribution situation. Basic configuration of the unit can be achieved via front panel buttons with an OSD (On-Screen Display). Advanced control requires the optional MCX Gen2 controller, or control software, and a LAN connection.

3.2 APPLICATIONS

- ♦ Video, Audio, LAN, IR, and USB over Copper Cable or Fiber extension
- ♦ Long distance data and video transmission immune to RF interference
- ♦ Point-to-Point Secure Video Conferencing
- ♦ Hotel or convention center display
- ♦ Multi-monitor broadcast
- ♦ Distributed video matrix system
- ♦ Distributed video wall system
- ♦ Remote KVM system control

3.3 PACKAGE CONTENTS

- ♦ (1) UHD+ Copper/Fiber Transcoder
- ♦ (1) 12V/3A DC Power Adapter
- ♦ (1) Power Cord
- ♦ (1) 3-pin terminal block

CHAPTER 3: TRANSCODERS

3.4 SYSTEM REQUIREMENTS

- HDMI® or DisplayPort™ source equipment, such as a media player, video game console, PC, or set-top box
- DisplayPort receiving equipment, such as an HDTV, monitor, or audio amplifier
- Analog audio receiving equipment, such as headphones, an audio amplifier, or powered speakers
- A 10-Gbps Ethernet network switch with jumbo frame and IGMP snooping support is required for distributed video systems. (Optional, required for multi-encoder/decoder copper systems)
- A 10-Gbps fiber Ethernet network switch with jumbo frame and IGMP snooping support is required for distributed video systems. (Optional, required for multi-encoder/decoder fiber systems)
- IEEE 802.3ae compatible SFP+ fiber module supporting a dual-optical fiber connection style, such as LC, or a pre-terminated crossover dual-optical fiber cable (required for fiber decoder)

NOTE: Single-mode and multi-mode support is dependent on the SFP+ modules used.

- MCX Gen2 Controller or control software to configure distributed matrix, video wall or multi-view systems (Optional)

CHAPTER 3: TRANSCODERS

3.5 FEATURES

- Provides AV, IR, RS-232, USB 2.0, and Ethernet extension
- HDMI® 2.0, DisplayPort™ 1.2, and DVI 1.0 compatible
- HDCP 2.2 and HDCP 1.4 compliant
- Multiple input/output options:
 - Encoder mode: (1) DisplayPort input; (1) HDMI input, and (1) DisplayPort Loop-through;
 - Decoder mode: (1) DisplayPort output;
 - USB connections:
 - Encoder mode: (1) USB Type B; Decoder mode: (3) USB Type A
 - Other connections: Encoder mode: (1) 3.5mm phone jack input; Decoder mode: (1) 3.5mm phone jack output, (1) 10G RJ-45 input/output, or (1) SFP+ input/output
- IP switchable with minimum latency (requires optional MCX Gen2 Controller or control software)
- Optional lossless compression to allow video transfer within limited bandwidth
- Extends up to 100m in point-to-point mode (with Cat.6A cable for copper decoder)
- Extends up to 30km (Maximum distance depends on the SFP+ module and type of fiber used for fiber decoder.)
- Supports independent breakaway A/V matrix switching with minimum latency, video wall generation, and multi-view compositing (requires optional MCX Gen2 Controller/control software)
- Enables pass-through of audio formats including LPCM (up to eight channels), Bitstream and HD Bitstream from HDMI or DP sources
- Unit can be powered directly by PoE when connected to a 10 Gigabit Ethernet (10GbE) switch that provides PoE (802.3at) (for copper decoder)
- Signal transmission interfaces with 10-Gigabit Ethernet switches via XFI (IEEE 802.3ae) compatible SFP+ fiber modules (for fiber decoder)
- Basic configuration via front panel buttons with an OSD
- Supports the use of an external control center (MCX Gen2 Controller) or control software to provide expanded functionality (Contact Black Box for more information.)

CHAPTER 3: TRANSCODERS

3.6 OPERATION CONTROLS AND FUNCTIONS

3.6.1 FRONT PANEL

FRONT PANEL

TABLE 3-1. FRONT-PANEL COMPONENTS

NUMBER IN FIGURE ABOVE	COMPONENT	DESCRIPTION
1	(1) Power LED indicator	Lights ON or OFF for Power
2	(3) USB 2.0 (Type A) ports	Connect directly to standard USB devices, such as a mouse, keyboard or flash drive to extend their USB functionality to the currently active/routed USB Device Mode decoder.
3	(1) Status LED Block	GbE LED: This LED will illuminate and blink to indicate a live and active connection on the local gigabit Ethernet port. VIDEO LED: This LED will illuminate Green when a video signal is live on the optical fiber streaming port or illuminate Amber when streaming a detected input stream. When no video is active, the LED will remain off, even if the streaming connection is valid. LINK LED: These LEDs will illuminate and blink to indicate data transmission and reception activity across the optical fiber streaming connection. USB LED: This LED will illuminate when the unit's USB ports have successfully paired with the USB ports on another unit. This LED will blink if the unit's USB ports are not currently paired and are in stand-by mode. T/R LED: This LED will illuminate Green when device is set as an Encoder. This LED will illuminate Amber when device is set for Decoder.
4	(1) Menu button	Press to enter the OSD menu, or to back out from menu items.
5	(1) Menu button: - Minus button	Press to move up or adjust selections within OSD menus. When not in a menu, press to manually switch between encoder source inputs.
6	(1) Menu button: + button	Press to move up or adjust selections within OSD menus. When not in a menu, press to manually switch between decoder source inputs.
7	(1) Enter/Info button	When inside an OSD menu, press to confirm a selection or to go deeper into a menu item. When not in a menu, press to activate the Information OSD.

CHAPTER 3: TRANSCODERS

3.6.2 REAR PANEL

CHAPTER 3: TRANSCODERS

TABLE 3-2. REAR-PANEL COMPONENTS

NUMBER IN FIGURE ON PREVIOUS PAGE	COMPONENT	DESCRIPTION
1	(1) DP OUT Port	Connect to a DisplayPort™ TV, monitor, or amplifier for digital video and audio output.
2	(1) HDMI® IN port	Connect to HDMI source equipment, such as a media player, game console, or set-top box
3	(1) DP IN port	Connect to DisplayPort source equipment, such as a media player, game console, or set-top box
4	(1) SFP+ port	For fiber decoder, insert a standard SFP+ module and connect the appropriate optical cable to allow data transmission to a compatible device or to a 10-gigabit optical fiber network switch. NOTE: The SFP+ module must support a dual-optical fiber connection style, such as LC, or be pre-terminated dual-optical fiber cables. Single-mode and multi-mode support is dependent on the SFP+ modules used.
5	(1) Cat5E/6/7 port	Connect directly to a compatible encoder/decoder for point-to-point extension, or to a 10 Gigabit Ethernet switch for distributed matrixing (requires MCX Gen2 Controller or control software) with a single Cat.5e/6/7 cable for extension of all data signals (for copper decoder). NOTE: If the connected network switch supports the IEEE 802.3at-2009 PoE (Power over Ethernet) standard, this unit can optionally be powered directly via this Ethernet port.
6	(1) Audio port	As OUT: Connect to powered speakers or an amplifier for stereo analog audio output. As IN: Connect to the stereo analog output of a device, such as a CD player or PC. NOTE: When the encoder and decoder are connected directly in a point-to-point configuration, audio is routed directly to the opposite end's Ports. Free routing can only be configured by use of the optional MCX Gen2 Master Controller or control software.
7	(2) IR ports	OUT Port: Connect to an IR Blaster to broadcast IR signals from a connected transcoder to devices within direct line-of sight of the IR Blaster. IN Port: Connect to an IR Extender to receive IR control signals and extend them to devices connected to a connected transcoder. Ensure that the remote being used is within direct line-of-sight of the IR Extender. NOTE: Currently, only 38KHz IR signal extension is supported.
8	(1) RS-232 Terminal Block	Connect directly to a PC, laptop or serial controllable device with a 3-pin adapter cable to extend the RS-232 signal between units.
9	LAN Port	Connection for device configuration only
10	USB-B Port	When configuring the transcoder as an encoder, use a USB Type A to USB Type B cable to connect to a PC.
11	DC 12V Port	Plug the 12V DC power adapter into this port and connect it to an AC wall outlet for power.

CHAPTER 3: TRANSCODERS

This unit provides the following six default EDIDs:

UNIT'S DEFAULT EDIDS	
FHD 2CH	1920×1080P@60HZ (4.95GBPS), 8-BIT COLOR, LPCM 2.0
FHD MCH	1920×1080P@60HZ (4.95GBPS), 8-BIT COLOR, LPCM 7.1 & BITSTREAM
UHD 2CH	3840×2160P@30HZ (10.2GBPS), 12-BIT DEEP COLOR, LPCM 2.0
UHD MCH	3840×2160P@30HZ (10.2GBPS), 12-BIT DEEP COLOR, LPCM 7.1 & BITSTREAM
UHD+ 2CH	3840×2160P@60HZ (18GBPS), 12-BIT DEEP COLOR, LPCM 2.0
UHD+ MCH	3840×2160P@60HZ (18GBPS), 12-BIT DEEP COLOR, LPCM 7.1 & BITSTREAM

DEFAULT EDIDS

NOTE: In some rare cases it is possible for custom or external EDIDs to cause compatibility issues with certain sources. If this happens, it is recommended to switch to one of the six default EDIDs for maximum compatibility.

CHAPTER 3: TRANSCODERS

NOTE: This function is only available when the transcoder is configured as an encoder.

	AUTO SWITCH
VOIP OUT AUTO MODE	OFF
	AUTO SWITCH

DEVICE SETTING MENU

TABLE 3-6. DEVICE SETTINGS

SECOND LEVEL IN FIGURE ABOVE	SELECTION	DESCRIPTION
STATUS	ENCODER/DECODER	Select transcoder as encoder or decoder.
TYPE	COPPER/FIBER	(Selection depends on available 10G copper or fiber connection) Device automatically switches between copper and fiber network. If both copper and fiber networks are connected, device will select the copper network. If selection is changed to fiber, the device will only use 10g fiber for connection.
USB Control Mode	DEVICE/HOST	Select DEVICE to enable USB Type-B connector, allowing a connection to a USB host, such as a PC or laptop. Select HOST to enable USB Type-A connectors in front, allowing a connection to USB devices, such as a keyboard, mouse, or USB storage. NOTE: In a point-to-point extension configuration, only one of the two transcoders should be set as a USB Device to avoid conflicts.
USB Virtual hub	Off/On	Enables or disables the "simultaneous connection" USB mode which allows the PC/Laptop connected to this unit to be paired with the USB devices on up to seven "Host" mode units. NOTE: Only available when USB Control Mode is set to "Device." USB routing can only be configured by use of the optional MCX Gen2 Controller or control software and is not valid in point-to-point configurations.
HDMI Out Source	DP/HDMI	Select the input source to display on the HDMI output.
VOIP Out Source	DP/HDMI	Select the input source to transmit as an AV over IP stream.

		Selecting [No] will keep the current settings.

CHAPTER 3: TRANSCODERS

3.6.6 BASIC AV EXTENSION

3.6.6.1 POINT-TO-POINT (ONE WAY)

The most basic extension configuration available is a point-to-point system with a single transcoder unit acting as an encoder connected directly to a single transcoder unit acting as a decoder. In this configuration the HDMI®/DP input on the encoder side is transmitted to the connected decoder side without modification to the audio or video format. The analog stereo audio input on the encoder transfers audio directly to the analog stereo audio output on the decoder. The LAN, RS-232 and IR ports form direct connections between the encoder and decoder as well. This configuration is ideal for basic video extension as well as remote KVM applications.

COPPER POINT-TO-POINT (ONE WAY)

FIBER POINT-TO-POINT (ONE WAY)

NOTE: These configurations do not use or require an external control center, such as the MCX Gen2 Controller, to function. No audio insertion/extraction is performed in these configurations.

CHAPTER 3: TRANSCODERS

3.6.7 ADVANCED AV EXTENSION

3.6.7.1 MCX GEN2 CONTROLLER

The MCX Gen2 Controller is a hardware solution designed to provide a unified and easy method to access and control all of the encoders and decoders in a system. It provides a user-friendly, and operating system agnostic, web-based interface allowing easy control over all of the most critical functions within a distribution system.

The MCX Gen2 Controller hardware is an optional component and is not included with individual encoder, decoder, or transcoder units. Please contact your authorized dealer for more information.

SAMPLE MCX GEN2 CONTROLLER SCREENSHOTS.

NOTE: Interface images are for example only and may differ from the delivered product.

CHAPTER 3: TRANSCODERS

3.6.7.2 CONFIGURATION EXAMPLES

When combined with the MCX Gen2 Controller, and a 10 Gigabit fiber Ethernet switch, this extension system gains a large number of additional configuration options including: multi-in/multi-out matrix switching with breakaway audio, video wall creation, and a multiview output mode. Audio extraction and embedding is fully controllable. Additionally, audio, USB, IR, and RS-232 routing can be fully controlled.

APPENDIX B: REGULATORY INFORMATION

B.1 FCC STATEMENT

This equipment has been tested and found to comply with the regulations for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with this Quick Installation Guide, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case, the user will be required to correct the interference at his/her own expense.

B.2 CE STATEMENT

This is a Class B product in a domestic environment, this product may cause radio interference, in which case the user may be required to take adequate measures.

B.3 ROHS

This product is RoHS compliant.

APPENDIX B: REGULATORY INFORMATION

B.4 NOM STATEMENT

1. Todas las instrucciones de seguridad y operación deberán ser leídas antes de que el aparato eléctrico sea operado.
2. Las instrucciones de seguridad y operación deberán ser guardadas para referencia futura.
3. Todas las advertencias en el aparato eléctrico y en sus instrucciones de operación deben ser respetadas.
4. Todas las instrucciones de operación y uso deben ser seguidas.
5. El aparato eléctrico no deberá ser usado cerca del agua—por ejemplo, cerca de la tina de baño, lavabo, sótano mojado o cerca de una alberca, etc.
6. El aparato eléctrico debe ser usado únicamente con carritos o pedestales que sean recomendados por el fabricante.
7. El aparato eléctrico debe ser montado a la pared o al techo sólo como sea recomendado por el fabricante.
8. Servicio—El usuario no debe intentar dar servicio al equipo eléctrico más allá de lo descrito en las instrucciones de operación. Todo otro servicio deberá ser referido a personal de servicio calificado.
9. El aparato eléctrico debe ser situado de tal manera que su posición no interfiera su uso. La colocación del aparato eléctrico sobre una cama, sofá, alfombra o superficie similar puede bloquea la ventilación, no se debe colocar en libreros o gabinetes que impidan el flujo de aire por los orificios de ventilación.
10. El equipo eléctrico debe ser situado fuera del alcance de fuentes de calor como radiadores, registros de calor, estufas u otros aparatos (incluyendo amplificadores) que producen calor.
11. El aparato eléctrico deberá ser conectado a una fuente de poder sólo del tipo descrito en el instructivo de operación, o como se indique en el aparato.
12. Precaución debe ser tomada de tal manera que la tierra física y la polarización del equipo no sea eliminada.
13. Los cables de la fuente de poder deben ser guiados de tal manera que no sean pisados ni pellizcados por objetos colocados sobre o contra ellos, poniendo particular atención a los contactos y receptáculos donde salen del aparato.
14. El equipo eléctrico debe ser limpiado únicamente de acuerdo a las recomendaciones del fabricante.
15. En caso de existir, una antena externa deberá ser localizada lejos de las líneas de energía.
16. El cable de corriente deberá ser desconectado del cuando el equipo no sea usado por un largo periodo de tiempo.
17. Cuidado debe ser tomado de tal manera que objetos líquidos no sean derramados sobre la cubierta u orificios de ventilación.
18. Servicio por personal calificado deberá ser provisto cuando:
 - A: El cable de poder o el contacto ha sido dañado; u
 - B: Objetos han caído o líquido ha sido derramado dentro del aparato; o
 - C: El aparato ha sido expuesto a la lluvia; o
 - D: El aparato parece no operar normalmente o muestra un cambio en su desempeño; o
 - E: El aparato ha sido tirado o su cubierta ha sido dañada.
