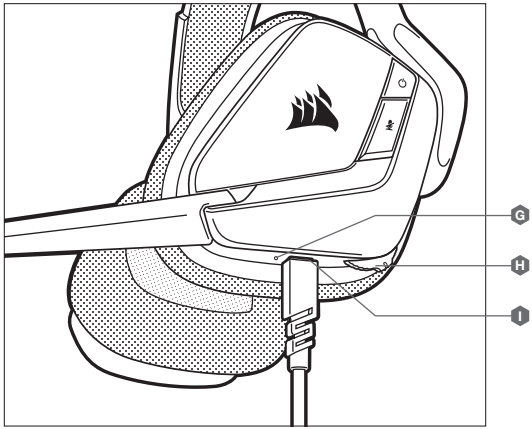
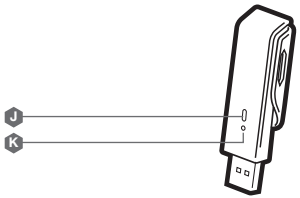
ENGLISH





GETTING STARTED WITH YOUR VOID RGB ELITE WIRELESS HEADSET

Connect the wireless USB transmitter to any working USB port on your PC. The headset is designed to operate at a range of up to 40 feet (12m) from the wireless transmitter, but other wireless devices, electronics, and obstructions such as walls may reduce wireless range.

IMPORTANT: The first time you use the CORSAIR VOID RGB ELITE WIRELESS Headset on a PC, the operating system will automatically install the device driver. After the device driver loads, we recommend you reboot your PC before use. Prolonged listening at high volumes may adversely affect your hearing. Take breaks between sessions and always begin with the volume at the lowest possible level before increasing.

iCUE

Go to **corsair.com/support/downloads** to download the iCUE Software. Using the iCUE software will enable the full feature set of your headset.

NOTE: If the headset is used without software, some features will be disabled.
> Install the iCUE software on a PC running Windows 7, Windows 8.1, Windows 10 or later.
> After installation is complete, reboot your PC, and launch iCUE.

iCUE SOFTWARE CAN BE USED TO
> Choose your RGB color preference and light intensity.
> Select and customize audio equalizer (EQ) settings.
> Adjust microphone input volume, and microphone sidetone.
> Set 7.1 surround sound on or off.

The software's built-in documentation explains how to use the headset's features in greater detail.

> Keep the headset at room temperature (20-30°C or 68-86°F).
