Trouble-Shooting

- Apple Macbooks** - Your Apple MacBook may start in self-protection mode. You will be prompted with an icon that your USB power has been disabled. Simply disconnect the Mini-Docking Station, click the disabled icon and re-connect the Docking Station, giving priority to the Power Delivery Port.
- Power Delivery** - When plugging and unplugging the AC adapter and/or the USB-C charging cable to the docking station, your device may briefly disconnect, then reconnect. Avoid disconnecting the power supply when transmitting data.
- Ethernet Port** is plug-and-play on Windows systems. With MacBooks, however, simply use *Network System Preferences* to create a new service, choosing USB 10/100/1000 LAN. Select this to connect to your local area network.

Temperature Advisory

The advanced technology integrated into your USB-C Docking Station may generate some heat, depending upon your user environment and overall higher demands upon device performance. Please note then that your VP6955 may at times feel slightly 'hot to the touch' during high performance operation; but that this is not hazardous to you, your computer system or your other connected devices. It is advised that you locate your VP6955 on your desktop to allow for heat dissipation and avoid placing anything directly upon the top of the device.

FCC Statement

This equipment has been tested and found to comply with the limits for a class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Re-orient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help

This equipment has been verified to comply with the limits for a class B computing device, pursuant to FCC Rules. In order to maintain compliance with FCC regulations, shielded cables must be used with this equipment. Operation with non-approved equipment or unshielded cables is likely to result in interference to radio and TV reception. The user is cautioned that changes and modifications made to the equipment without the approval of manufacturer could void the user's authority to operate this equipment.
